R12 MultiTrak System Software Version History

You can always download the latest system software for free on the web site shown below.

https://zoomcorp.com/

Version 2.30

· **Release to fix the following issues in September 2023**
1. Rhythm track loops would not play in rare cases.
2. After a track type was changed from synth to audio once, synth sounds would not be output.
3. After swapping stereo and mono tracks, when mono tracks were recorded, they would be recorded as stereo.
4. After swapping stereo and mono tracks, unintended effects would sometimes be applied to other tracks.
5. After swapping stereo and mono tracks, stereo tracks would sometimes play back at half speed.
6. After swapping tracks, during playback, other regions would play back repeatedly in parts without regions.
7. After moving a mono region to a different track, if a stereo region was added to the track where it had been, the waveform would sometimes not be shown correctly.
8. After pressing the REC button during recording to switch to playback, pressing the FF/REW button would not update the display.

Version 2.10

· **Release to fix the following issue in July 2023**
1. When recording with a project that had a bit depth of 24-bit, the recording data could be damaged.

Version 2.00

· **Release to add the following function in March 2023**
1. Support has been added for the dedicated R12 Control app, which enables control of the R12 from an iPad.

Version 1.00

· **Released as mass production in September 2022**
